

55gal Drum to Rain Barrel Conversion

Don Titmus

Don will take you step by step through the process of converting a drum to a Rain Harvesting Barrel. You must decide where it will be set-up so the overflow pipe can be installed correctly, and you need to know how to use it properly. Convert your 55 gallon drum [or one Don supplies you for \$25 - a clamp top], everyone add \$20 for the parts needed in the conversion.
