

Bee Blocks and Mossie Traps - A Community Service - Don Titmus

Making and Hosting Bee Blocks/habitats for native pollinators - The Mason Orchard Bee, and the Leaf Rolling Bee are two of the solitary pollinators that are local. Building a nesting block or creating space for these and others will benefit you and your fruit and veggie production with minimal cost and bee encounters. Make it, stick it up and forget it! Add some flowers and in no time you will have a Bee Oasis!

Assemble a Natural Mosquito Trap -combine plants, still water and select fish and you quickly have a micro pond that serves as a natural trap for the whole community. Don talks about the types of mossies, how to live together (or not), how to manage this Permaculture Strategy, and what to do when the Vector Control truck fogs You.
