

Rain Water Harvesting – Tom McDonald

Are you curious why we should harvest our Sonoran Desert resources?

Rain Water harvesting is the accumulation and storing of our rain water for re-use.

There are various techniques such as Terracing or Waffle Gardens and more ways to accomplish this.

Tom McDonald will give a Free 1 hour class on Rain Water Harvesting on September 16th at 9:00 a.m., telling us why and how to go about retaining and using our most precious resource.
